

information related to the content when an illuminance value outside the first device is equal to or greater than a predetermined value.

17. A non-transitory computer-readable recording medium having recorded thereon a computer program for executing a method performed by a first device comprising:

displaying an information related to content reproduced by a second device;

detecting an exit of the first device from a service zone of the second device;

requesting a server for the information related to the content reproduced by the second device based on detecting the exit of the first device from the service zone of the second device and to receive the requested information related to the content from the server;

receiving the information related to the content from the server; and

displaying the information related to the content received from the server.

18. The non-transitory computer-readable recording medium of claim **17**, wherein the detecting of the exit of the first device comprises detecting a disconnection of communication between the first device and the second device.

19. The non-transitory computer-readable recording medium of claim **17**, wherein the detecting of the exit of the first device comprises recognizing the exit of the first device by an external device located outside of the service zone of the second device or located at a boundary of the service zone of the second device.

20. The non-transitory computer-readable recording medium of claim **17**, wherein the requesting of the information related to the content comprises transmitting at least one of information about the second device and information about the service zone of the second device.
